

Food • Land • & Water

Toward a Sustainable Wisconsin

Project Goals

Understand the Human Footprint

Current information on the status of Wisconsin will be understood, including:

- Wisconsin's land and water (overview)
- Population trends
- Infrastructure trends
- Economic trends
- Land use status and trends
- Water quality and quantity status trends
- Public health in relation to land and water.

Collaborate with Stakeholders

Stakeholders involved will share information, perspectives, and work toward solutions on emerging challenges related to:

1. Surface Water Quality Issues
2. Groundwater Quality Issues
3. Groundwater Quantity Issues
4. The Future of Wisconsin's "Working Lands"

Share the Story

A two day conference will present the results of the stakeholder meetings. Attendees will listen, discuss, and build new connections as they learn about Wisconsin's future story as it relates to food, land and water.

Attendees will also help shape future initiatives and continue the conversation. This may take the form of an online forum that makes the information accessible to a wider audience.

Participants

WI Land+Water

WIPPS

(Wisconsin Institute for Public Policy and Service)

- Project coordination
- Grant applications and management
- Budget and accounting
- Staff and contractor management
- Overall project implementation

Steering Committee

- Establish relationships and communications with other committee members
- Review Workgroup progress and recommend future steps
- Advise WI Land+Water & WIPPS on project implementation

Stakeholder Workgroups

- Establish relationships and communications with other workgroup members
- Discuss and expand on topic background information
- Share and document important Stakeholder positions on potential topic solutions
